## **Dwyka's diamond tailings project exceeds design capacity**

### **Over 56,000 tonnes processed in March**

Dwyka Resources Limited ("Dwyka" or the "Company") is pleased to announce that its Kimberley tailings re-treatment operation continues to improve as the de-bottlenecking program continues. The plant was designed with a nameplate capacity of 50,000 tonnes per month. However, optimisation of the material balance through the plant is progressively improving the utilisation of components capable of exceeding design throughput.

The record 56,029 tonnes of kimberlite tailings processed in March resulted in the recovery of over 3,000 carats of diamonds. Daily plant throughput data for the current month available as at the date of this announcement indicates that overall tonnages for April should exceed the March figures.

The plant is operated by Superkolong (Pty) Ltd, Dwyka's 70% owned South African subsidiary, the remaining 30% of which is owned by Kolong Investment Holdings (Pty) Ltd, Dwyka's Black Economic Empowerment ("BEE") partner.

Melissa Sturgess, Dwyka's CEO, said today: *"The Kimberley team have worked tirelessly to achieve this goal and it is a credit to all of them. It is a success for Dwyka and a considerable benefit to the community as it provides local employment opportunities and enhances the benefits provided by BEE"*.
